

# BENEFITS OF HORSEHAGE

## Easy to Feed

Every bale comes packed in wedges. Simply pull out a wedge and fill your net.

## Dust Free

Helps prevent and manage respiratory conditions. A healthy respiratory system is vital for optimal performance in horses.

## Hoof Kind Options

HorseHage High Fibre and HorseHage Timothy are suitable for those prone to laminitis.

## Never Rebagged

For a more consistent fermentation process.

## Four Varieties

HorseHage comes in four different varieties - Ryegrass, High Fibre, Timothy and Alfalfa - offering different energy values and providing a forage choice to suit all types of horses and ponies.

## 100% Natural

No chemical additives, mould inhibitors, inoculants, flavourings, or molasses.

## FEMAS Certified

Fully traceable from field to purchase. Feed with confidence.

## BETA NOPS Certified

Reduced risk of naturally occurring prohibited substances. Compete with confidence.

## 100% Guarantee

100% quality guarantee on every bale, backed by expert nutritionists and research.

# HOW TO FEED HORSEHAGE

Gradually increase the amount of HorseHage you feed over 5-7 days, while reducing the amount of forage.

HorseHage should be part of a balanced diet. Choose a broad spectrum vitamin and mineral supplement, complete feed, or balancer to complement HorseHage and meet your horse or pony's individual needs.

For horses and ponies prone to laminitis, HorseHage High Fibre or Timothy can be safely fed at controlled levels to maintain fibre levels and keep the gut moving. This is especially important during the Spring and Autumn when grazing may need to be restricted.

If calories are a concern, HorseHage can be mixed with a lower calorie forage such as oat straw. The straw should be clean, of good quality, and introduced slowly. Ensure that fresh water is always available.
